

EZPull MTX-8 for 5-Stand, FITASC and Flurry

EZPull MTX-8 is an 8 trap wireless controller featuring manual mode or automatic sequencing from configurable menus for 5-Stand and Flurry. MTX-8 can be used as a stand alone or with the EZPull TargetManager wireless RFID card payment system. The MTX-8 is simple to operate. Target selection is displayed on an LCD display and the keypad is arranged for intuitive operation.

EZPull wireless systems have dependable long distance reception. Our receivers do not need external antennas that can break and cause water leaks.

Up to eight **SRX01** trap receivers can be used for a completely wireless 5-Stand or FITASC setup.

For existing wired 5-Stand installations, the **MRX-8** wireless 8 traps relay hub provides an economic solution.

Using MTX-8 With the EZPull TargetManager, you can let your customers shoot 5-Stand or FITASC unsupervised. You will get paid for every target. TargetManager is loaded with features including:

- Two payment modes: Pay-per-target, with card placed in slot or Pay-per-round - one transaction loads 25 targets to TargetManager and the card can be removed.
- Displays targets count up and count down.
- Solo shooters don't need to "fumble" with buttons at each station. The Solo Delay is programmed to the target card. Just put the card in the slot and targets will be automatically delayed.
- Use in any Clay Target sports: Trap, Skeet, Sporting Clays, 5-Stand, FITASC, etc.
- Rugged design and waterproof enclosure for prolonged exposure to the elements.
- Simple system architecture: totally wireless.
